

SENSORY ROOM

AT THE COMMUNITY CENTER

A sensory room is a therapeutic room that integrates sound, colors, tactile objects, and sometimes even olfactory stimuli. Sensory rooms are designed to create a safe, relaxing space or an educational environment. They can be used for relaxation or for motor and cognitive development. They are most helpful for persons with sensory processing disorders such as autism and dementia.

JUNE SEMINARS

Understanding Alzheimer's and Dementia

Monday, June 26, 3:30 pm
